Are your products SMT or Mixed Technology products?

Millison Technology has a flexible, responsive facility for manufacture of these types of products .

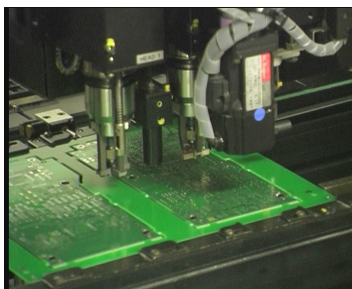

Our team has the qualifications, experience, equipment and support to e electronics manufacturing services that are responsive and provide the lowest total cost of ownership.

Our flexibility allows us to provide you with:

- a fast turn around express manufacture service.
- smaller multiple drop deliveries as required.
- manufacture of smaller lot sizes.
- a reduction in cycle time.
- reserve production capacity.
- expert design and engineering feedback.
- prototyping services.

Millison competes in the market place through selling value. We consistently work to provide the lowest total cost of ownership and highest value through:

- The right people.
- Low overheads.
- Using flexible production equipment.
- Right sizing of our production equipment.
- Reducing complexity.
- Increasing quality.
- Managing capacity.

Our Company:

Millison is unusual in the world of contract manufacturers. Our business began by providing contract design services to industry and much of our business still comes from this area. As a result, our service provides expert design and engineering feedback on how to improve your products total cost of ownership.

Responsiveness is our key:

Do you sometimes require boards built, but your supplier is unable to provide an immediate response?

At Millison, we are flexible enough to provide responsiveness to our clients.

We can offer short-term help with your special capacity needs, such as fast turn around or larger than usual quantities.

In the long term Millison strategically manages its capacity, to retain our responsiveness to you.

Millison provides very short manufacture lead times compared to industry standards.

Component procurement:

Millison provides our customers with full component procurement and supply chain management services.

We provide several flexible component procurement and management strategies that include:

- procurement and management all your component requirements.
- procurement and management all components except for your chosen mission critical parts, which are managed by yourself.
- procurement and management of all the common components, such as resistors, capacitors etc., while you procure and manage all other components.

We are also more than happy for you to supply the full kit of components.

Manufacturing Capabilities:

We manufacture single and double sided boards (components on both sides) using re-flow and wave soldering techniques.

We manufacture all boards to the appropriate IPC610 acceptability standard. These can be class 1, 2 or 3 as required by the customers. We also work to customer's specific standards where required.

We are currently manufacturing Fine Pitch technologies down to 0.3mm as well as BGA and MicroBGA up to 1280 pads

The Millison Advantage:

Millison Technology supplies a full range of design, engineering and manufacturing services. Total integration as well as unmatched enthusiasm from our staff provide you with 'your ultimate solution' for your electronics needs.

**Quality, Reliability and Dependability
at a Fair and Competitive price !**

Please contact Paul Isaacs or Liliana Termure on (03) 8793-9500 for a no obligation proposal for the manufacture of your product.
